

Project Title

Creating an Efficient Furniture, Fixtures and Equipment (FFE) Monitoring Process

Project Lead and Members

Jessie Olivia Yang Yunjie

Organisation(s) Involved

SingHealth Community Hospitals

Healthcare Family Group(s) Involved in this Project

Healthcare Administration

Applicable Specialty or Discipline

Finance

Aim(s)

Create dashboard(s) for efficient fund monitoring such that it reflects the status of fund utilizations and savings by integrating information available from various data sets while reducing manual intervention.

Background

See poster appended/ below

Methods

See poster appended/ below

Results

See poster appended/ below

Conclusion

See poster appended/ below

Project Category

Care & Process Redesign

Quality Improvement, Workflow Redesign

Technology

Digital Health, Data Analytics

Keywords

Fund Monitoring and Tracking, Fund Utilisation

CREATING AN EFFICIENT FFE MONITORING PROCESS

Singapore Healthcare Management 2022

Jessie Olivia Yang Yunjie SingHealth Community Hospitals

Background

Manual excel tracking of grant utilization for MOH-funded Furniture, Fixtures and Equipment (FFE) can be tedious, time consuming and subject to risk of errors as the list of purchases and claims gets longer over the funding period. Moreover, it does not provide meaningful output to stakeholders.

Results

A more accurate and enhanced output file with dashboards generated to assist stakeholders: > Management: Provides overview funding Of

Thus, we want to:

 \succ Create dashboard(s) for efficient fund monitoring such that it reflects the status of fund utilizations and savings by integrating information available from various data sets while reducing manual intervention.

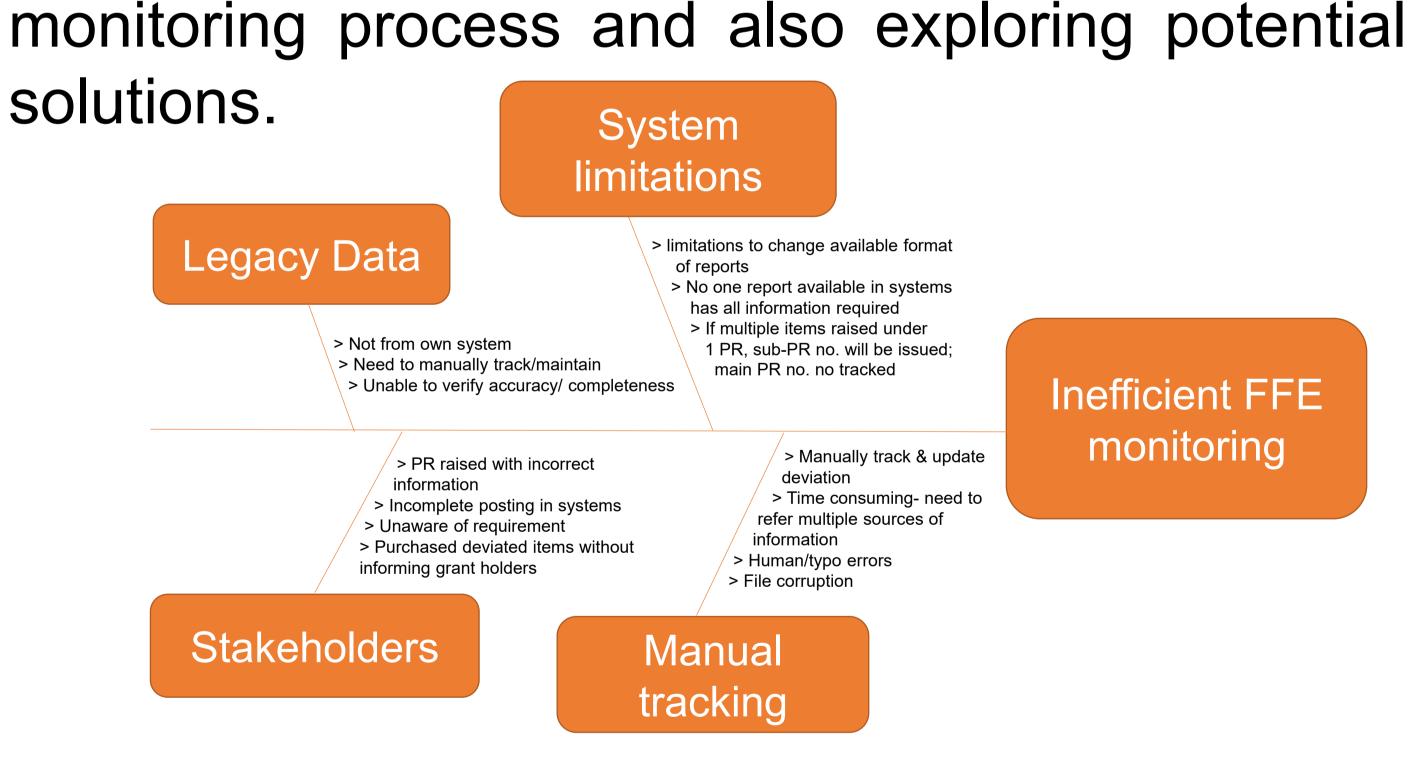

Methodology

Plan: Conduct fishbone analysis to identify potential causes that undermine the FFE

utilisation rate, savings between approved and actual FFE cost, amount claimed till date, amount pending delivery/invoicing;

Departments/Users: Amount items and procured/partially procured/yet to procure/yet to deliver/yet to invoice, savings, claim status.

Do and Study: To obtain a desire output file in excel format by processing and merging data obtained from various data sources through Microsoft Power query application and upload output file onto Tableau Visualizations software to create dashboard(s) for use by relevant **Pros**: stakeholders.

Act: Conduct data validations between output file and existing manual tracking file to identify differences; then rectify gaps relevant to stakeholders so as to provide accurate reporting; sharing of learnings with stakeholders for more capturing accurate data and process improvement.

- Visualisations provide easy to understand updates to stakeholders for decision making.
- Data can be easily updated to dashboard to provide information to requestor.
- Time spent on obtaining output reduced by approximately 30% for each claim.
- Cons: Need to manually clean and maintain legacy data.
- Continuous manual validations required to sift out input errors at source to augment automation.
